

Fig.1 The PAC6 module.

#### APPLICATION

The relay module used to work as an executive element with an analog output of the controller to activate peripheral equipment requiring greater power.

#### OPIS UKŁADU

The PAC6 and the PAC6T are four relay modules that convert the analog input signal (0 - 10V) from the controller to 64 discrete, voltageless output states. Relays have SPST-NO contacts. Built-in input voltage level detection circuit allows enforce logical signals without transition states (no short switching of contacts). An important parameter is **the input signal settling time**. Typically it is 400ms and can be adapted to the needs of the customer in the range of 20ms up to several minutes. Time should be chosen to be equal to or greater than the output signal settling time of the controller, which proofing the module for short-term interference.

The hysteresis circuit prevents contacts from "flickering" in switching points. The PAC6 has electromechanical relays with normally open contacts. The PAC6T has a MOSFET solid state relays. LED diodes indicate output states according to enclosed diagram.

#### TABLE OF STATES

State	OPP [V]	S1	S2	S3	S4	S5	S6	State	OPP [V]	S1	S2	S3	S4	S5	S6

## TECHNICAL DATA

Module name	PAC6	PAC6T
power supply	24 V AC/DC $\pm$ 10%	
Max. current consumption	65 mA for 24 V AC / DC	30 mA for 24 V AC / DC
Input resistance	100k $\Omega$	
Input voltage	0 - 10V	
Sensitivity	10mV	
Input signal settling time	400ms	
Hysteresis width	50mV	
Type of relay	Electromechanical	Solid state MOSFET
Contact switching capacity alternating current $\cos\phi=1$ direct current	400V, 8A [2000VA] 32V, 8A	270V, 130mA 400V, 130mA
Contact resistance	100m $\Omega$	30 $\Omega$
Protection class of the case	IP-40	
Compliance with EU standards	2004/108/EC	
Ambient temperature range	-10...+55 $^{\circ}$ C	
Diameter of terminals	2,5 mm <sup>2</sup>	
Protections	against reverse polarisation	
Mounting	DIN-35 rail	
Dimensions (L x W x H)	90mm x 35mm x 56mm	
Weight	115 g	95 g
